Abstract

The present 3D Dataset contains the 3D models analyzed in the publication: Mummified Paleogene Spirostreptida and Julida (Arthropoda, Diplopoda) from southern France. Papers in Paleontology.

Keywords: Cambalida, Colombière, Paleogene, Quercy, Spirostreptida

Submitted:23/02/2024, published online:08/09/2025. <https://doi.org/10.18563/journal.m3.225>

INTRODUCTION

These models are the result of the microCT-scanning of multiple specimens of two millipedes species from the orders Spirostreptida and Julida: *Protosilvestria sculpta* (Handschin 1944) (see Figure 1) and a specimen of the family Blaniulidae (see Figure 2); see also table 1. These specimens come from the Quercy phosphorite formations and the La Colombière locality in Montpellier and are dated from the Eocene or Oligocene depending of the specimen. They are preserved in three-dimensions and are phosphatized. Thanks to microCT-scanning, new details were revealed notably on the sexual dimorphism of *P. sculpta* with other characters that helped classify *P. sculpta* as a member of the suborder Cambalidea. The description of a collum not recovering the back of the head enabled to describe one specimen as member of the Blaniulidae specimen (order Julida) thus clearly different from *P. sculpta*.

METHODS

Two specimens, UM-SND-1704 and UM-ROQ1-500, were scanned using a GE Sensing&Inspection Technologies Phoenix X-ray phoenix v—tome—x CT-scan at the MATEIS laboratory of INSA. The 3D surfaces were extracted semi-automatically within AVIZO 8 using the segmentation threshold selection tool. NMB specimens were scanned using high-resolution X-ray computed tomography (Phoenix Nanotom, GE) from the Biomaterials Science Centre of the University of Basel, Switzerland. Their 3D surfaces were also extracted semi-automatically within AVIZO 9.0. The 3D surface models are provided in

.ply format, and can therefore be opened with a wide range of freeware.

ACKNOWLEDGEMENTS

We thank Janine Mazenauer, Loïc Costeur, and Florian Dalmayer from the Naturhistorisches Museum Basel for their help with the collection and scanning process. We thank MATEIS at INSA Lyon for µCT facilities and the Centre Technologique des Microstructures (CTµ) for access to scanning electron microscopy.
